

Basics

- `#!/bin/bash` -> Tells the computer which program to use to run the script. Always put this on the very first line
- `chmod +x script.sh` -> it gives execute permission to all users
- comments -> `#` is use to give single line comment
- variable -> `$NAME="Phalguni"`
- Reading user input -> `read -p "enter age" age`
- CLI arguments -> `$1`, `$2` refers to argument numbers
`$#` - number of arguments passed
`$@` - all arguments passed

Operators and Conditionals

- String comparison -> =

Operator	Meaning	True if
=	Equal	Strings match exactly.
!=	Not equal	Strings do not match.
-z	Zero length	String is completely empty.
-n	Non zero length	String contains text.

Operators and Conditionals

- Integer comparisons ->

-ne		Not equal
-lt		Less Than
-gt		Greater than
-le		Less than equal to
-ge		Greater than equal to

- File test operators ->

-f	File
-d	Directory
-e	File exists
-r	read permission granted
-w	Write permission granted
-x	Execute permission granted
-s	Check is size greater than 0

- Logical Operators ->

&&	Checks if both are true
	Checks if multiple conditions are true
!	Not is use to reverse or invert
